Peer review report 1 on Hydrological Response to Climate Change: the Pearl River, China under Different RCP Scenarios

Original Submission

Recommendation

Minor Revision

Comments to the author

The author has explained why they choose the WATCH Forcing Data (WFD) to run the VIC model, however, I do think the observed precipitation, wind speed, maximum and minimum temperature should be used in the VIC model. Moreover, the author should provide more information about the WFD data, such as resolution.

Zengxin Zhang, Ph.D.*
